The XC-ST Series cameras incorporate the innovative CCD and signal processing technologies into a compact black and white camera module. A new external trigger design allows the electronic shutter speed to be freely specified by the width of an external trigger pulse or by a switch setting on the rear panel of the camera. These cameras are also user-friendly, with all switch settings located on the rear panel.

Moreover, the 1/3 type CCD, 1/2 type CCD and 2/3 type CCD models have the exact same dimensions, simplifying space requirements and making it easy to interchange them if necessary. These features, along with high picture quality and high shock and vibration tolerance make the XC-ST Series cameras ideal for demanding machine vision applications.

Connections

Locations of Parts & Operations

- Lens mount (C mount)**
A commercial C mount lens as well as Sony standard lenses can be used.
- Camera fixing reference hole**
High-precision screw hole machined on the lens mount surface.
- Screw hole for tripod adaptor installation (VCT-ST70I)**
- 12 pin multi-connector**
The 12 pin multi-connector is connected to a DC IN/SYNC (DC power/sync signal input)
- BNC connector**
Video out
- Gamma correction**
ON/OFF switchable
- Internal/External synchronization switch**
In the EXT position, if there is no external sync input, the internal sync is activated inside the camera. In this case, HD/VD signal is not output through the 12 pin multi-connector.

- Trigger polarity switch**
The trigger polarity is selectable (neg/pos polarity)
- 75 Ω termination switch**
- Dip switch**
Dip switch 1 - 4: Shutter speed
Dip switch 5: FRAME/FIELD exposure
Dip switch 6 - 8: Normal shutter mode, External trigger shutter mode, Restart/Reset mode
- Gain switch**
A: Image output at a fixed level of image according to the brightness of the subject. (Variable range: 0 to 18 dB)
F: Fixed gain 0 dB
M: gain (manual)
Factory setting: the variable gain is adjusted to the fixed sensitivity for a standard subject. When using two or more XC-ST30/CE, XC-ST50/CE, XC-ST51/CE or XC-ST70/CE cameras, identical images of the same subject can be attained.
- Gain control**
The gain can be adjusted between 0 to 18 dB when the gain switch is set to "M".

Trigger Shutter Modes

A new external trigger design allows the electronic shutter speed to be freely specified by the width of an external trigger pulse or by a switch setting on the rear panel of the camera.

Shutter speed setting based on the trigger width

* When switching from Ext. trigger to regular operation the WEN pulse is output

Shutter speed settings by dip switch control

Shutter speeds are set by dip switches 6, 7, 8, on the camera's rear panel. The width of the trigger pulse is irrelevant.
